

Field Test Authorization, License Notice, and Confirmation Packet

Document ID: AF-FT-2026-0921 | Issued: 21 September 2026 | Repo: mitchell5584dm-tech/00Arcana-Forensic00

Classification: Synthetic evaluation materials. Not a court exhibit. Not a paid license key.

1. Purpose

This packet authorizes automated and supervised field testing of the open-source Arcana Forensics workspace on synthetic demo evidence only. It records the software license, the trial evaluation window, the operator confirmation checklist, and the expected machine-generated test result.

2. Software license (open source)

The source code in repository 00Arcana-Forensic00 is licensed under the MIT License, Copyright (c) 2026 Arcana-Forensics. Permission is granted, free of charge, to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, subject to inclusion of the copyright and permission notice. THE SOFTWARE IS PROVIDED “AS IS”, WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT.

3. Trial / field-test terms

The trial pack is an evaluation overlay on the MIT code. It does not replace the MIT license. Field testers agree: (a) use only synthetic files in demo/ or other authorized lab samples; (b) 14-day evaluation window beginning 21 September 2026 and ending 5 October 2026 unless extended in writing; (c) five-file / 1 MiB pack cap for the published trial set; (d) published passphrase trial-pack-passphrase is for this packet only; (e) no disk wipe, no live customer data, no production evidence; (f) operators remain responsible for legal authority on any later real-world use.

4. What automated field testing will run

On each push to main, GitHub Actions job field-test will: check out the tree, install the Rust 1.75 toolchain, run cargo test --workspace, build arcana-acquire, generate magic-byte samples, acquire the open-source demo evidence into a disposable case directory, and verify the custody hash chain. A passing job is the machine confirmation that the acquire → vault → custody path still functions.

Check	Expected confirmation
cargo test --workspace	all crate unit tests pass
cargo build -p arcana-acquire	CLI binary exists
acquire demo/opensource evidence	files sealed, chain_ok=true
verify --password	vault_mismatches=0

5. Field tester confirmation

By running the software or by a passing field-test workflow on the listed commit, the tester confirms:

- I will test only synthetic or separately authorized samples.
- I understand the MIT “AS IS” disclaimer and the 14-day trial overlay.
- I will not treat this packet as a chain-of-custody record for a live matter.

Tester name: _____ Date: _____

Lab / site: _____ Case ID: oss-demo-001 / trial-14d-001

Commit SHA under test: _____

Result (circle): PASS FAIL PASS-WITH-NOTES

Issuer confirmation: Arcana-Forensics authorizes this packet for automated CI field testing and supervised lab evaluation of repository 00Arcana-Forensic00 as of 21 September 2026.
